

IN THE CLAIMS

1 Claim 1 (Currently Amended): A collapsible feeder for birds and small rodents,
comprising:

5 a collapsible feeder body, selectively movable between collapsed and extended
positions, having upper and lower ends, comprising a base and a rim, a series of
hollow body segments of graduated diameters which are extendible to form a
feeder body, the segment of smallest diameter being joined to said base, the
other segments being collapsible around the segment of smallest diameter
inwardly of said rim;

10 the segment of smallest diameter having feed outlets formed therein whereby feed in
the feeder body may pass outwardly through said feed outlets onto said base
inwardly of said rim;

 a hanger pivotally secured to the segment of greatest diameter; and

15 each of said feeder segments including a selective locking structure thereon;

said selective locking structure yieldably maintaining said feeder body in its said
extended position.

20 Claim 2 (Original): The collapsible feeder of claim 1 wherein said body segments
are annular-shaped.

 Claim 3 (Original): The collapsible feeder of claim 1 wherein said body segments
are square-shaped.

25 Claim 4 (Original): The collapsible feeder of claim 1 wherein said body segments
are rectangular-shaped.

1 Claim 5 (Original): The collapsible feeder of claim 1 wherein said feeder body is comprised of a metal material.

Claim 6 (Original): The collapsible feeder of claim 1 wherein said feeder body is comprised of a plastic material.

5 Claim 7 (Original): The collapsible feeder of claim 1 wherein said feeder body is comprised of a glass material.

Claim 8 (Original): The collapsible feeder of claim 1 wherein said hanger is removably pivotally secured to the segment of greatest diameter.

10 Claim 9 (Original): The collapsible feeder of claim 1 wherein the segment of greatest diameter includes a downwardly and outwardly extending roof and wherein a selectively removable cover is mounted on said roof.

Claim 10 (Currently Amended): A collapsible feeder for birds and small rodents, comprising:

15 a collapsible feeder body, selectively movable between collapsed and extended positions, having upper and lower ends, comprising a base and a rim, a series of hollow body segments of graduated diameters which are extendible to form a feeder body, the segment of smallest diameter being joined to said base, the other segments being collapsible around the segment of smallest diameter inwardly of said rim;

20 the segment of smallest diameter having feed outlets formed therein whereby feed in the feeder body may pass outwardly through said feed outlets onto said base inwardly of said rim;

25

a hanger pivotally secured to the segment of greatest diameter;

each of said feeder segments having a locking structure associated therewith which
yieldably locks said feeder body in its said extended position.

Claim 11 (Original): The collapsible feeder of claim 10 wherein said locking
structure includes cooperating locking members on said segments.
